Project: Nuclear Medicine - Cardiology Patient Flow  
Last Updated: 8/21/2017

Team Members: Kelly Haar, Hannah Sullivan, Kathryn Laverdiere, Nuclear Medicine Department, Suneela Nayak, Stephen Tyzik, Ruth Hanselman

Executive Sponsor: Mark Parker  
Facilitator: Haley Pelletier

Problem/Impact Statement:
Upon Operational Excellence performance improvement measures being undertaken by the Nuclear Medicine department, Cardiologists associated with the unit wanted a goal to reflect success rate of having one stress test per day ready to be read by the cardiologist at noon. The remainder of the Nuclear Medicine staff has since undertaken a variety of KPIs, to combat the many areas of delay associated with these procedures, in an attempt to provide feedback to the cardiologists, while simultaneously providing better patient care.

Scope:
In Scope: Nuclear Medicine department at Maine Medical Center (MMC)  
Out of Scope: Departments within MMC that are procedural in nature, and require the timeliness of a variety of other units. Additionally, Nuclear Medicine departments at other, similar, tertiary hospitals may benefit from the success of this work.

Goal/Objective:
KPI 1: 100% of cardiac stress tests will be completed within the scheduled time frame  
KPI 2: 100% of the time, patients to undergo nuclear cardiac stress tests will be ready for injection by 7:30 AM  
Overall goal: One stress test will be ready for cardiologist to read by noon-time everyday, in an attempt to increase the efficiency of the process, as well as decrease time of procedure and length of stay.

Baseline Metrics/Current State:
At baseline, it is very difficult for the Nuclear Medicine department to complete stress tests within the scheduled time frame, and as a result the cardiologist often does not have a test to read by noon for that day, leading to further delays for subsequent patients. Currently, patients spend a great deal of time waiting for the nuclear medicine and stress test procedure to be completed, with added wait time contributing to poor patient experience, as patients are NPO until the end of testing.

Root Cause Analysis:
Nuclear Medicine Cardiac Stress Test Process:
1. Between 6:30 and 7:30 AM Cardiologist performs test on patient and orders Nuclear Medicine to perform Prep and imaging
2. Prep and imaging results are sent to nuclear medicine for processing
3. Nuclear Medicine sends imaging results to Cardiologist in morning
4. Cardiologist reads imaging results and verifies if patient is ready for injection
5. If patient is ready for injection, Cardiologist orders stress test
6. Nuclear Medicine performs stress test on patient
7. Nuclear Medicine sends stress test results to Cardiologist in morning
8. Cardiologist reads stress test results and verifies if patient is ready for injection

When it was shown to management on a daily Gemba walk that time waiting for cardiology availability was a major barrier in getting the nuclear medicine procedures completed in a timely manner, a discussion was started about the potential benefit of hiring an additional provider, which has been successfully accomplished. Additionally, it has become standard practice, and recognized by the nursing staff interacting with nuclear medicine, that a working IV is required for a patient to be considered “ready for injection.”

Outcomes

Upon Operational Excellence performance improvement measures being undertaken by the Nuclear Medicine department, Cardiologists associated with the unit wanted a goal to reflect success rate of having one stress test per day ready to be read by the cardiologist at noon. The remainder of the Nuclear Medicine staff has since undertaken a variety of KPIs, to combat the many areas of delay associated with these procedures, in an attempt to provide feedback to the cardiologists, while simultaneously providing better patient care.

Next Steps

- Hiring of a physician’s assistant who can take some of the Cardiology workload, in an attempt to improve the workflow for Nuclear Medicine

- Once the new provider is implemented into the daily rhythm, there will be auditing of further delays, in order to discern what other barriers are present in getting cardiac stress tests completed in the appropriately scheduled time frame.

Plan

- Do
- Study
- Act
