## New ambulance will serve Maine's children

Maine's first and only ambulance totally dedicated to acutely ill infants and children went into service Friday, April 26. Maine Medical Center's Neonatal and Pediatric Critical Care Transport Ambulance is a \$150,000 life-saving vehicle purchased entirely with donated funds.

The ambulance was purchased with funds from Maine Medical Center's Children's Miracle Network. It provides a dedicated vehicle for two MMC programs that have been providing critical services to Maine's infants

and children since 1992. MMC healthcare professionals and the City of Portland's Medcu personnel will continue their work in this specially designed ambulance.

"This ambulance represents the critical link of life between Maine's community hospitals and Maine Medical Center," said Sandra Bagwell, MD, Interim Chief of Critical Care

Medicine and Director of Pediatric Critical Care Medicine. "This customized vehicle is outfitted with essential equipment dedicated completely to caring for acutely ill infants and children.

The transport teams stand ready to respond 24 hours a day, seven days a week, when a child is in need of Neonatal Intensive Care or Pediatric Critical Care Services available only at MMC."

The MMC Neonatal Transport Team assists smaller hospitals in Maine with cases of premature and critically ill babies. The team is on call 24 hours a day for babies with pneumonia, premature lung development, or other problems. The team, which consists of a physician or nurse practitioner, a registered nurse, and a respiratory therapist, goes to the hospital in the ambulance. There the team stabilizes the infant, and transports the patient to Maine's only Level III neonatal intensive care unit, located at Maine Medical Center.

The Pediatric Transport Team provides similar services for older infants and children. Before the advent of the transport program, healthcare professionals from smaller towns would have to leave their other duties and use the town's or hospital's ambulance to transport children to MMC. The MMC transport program allows professionals and ambulances to stay in their towns providing services.

The two programs have transferred more than 700 infants and children since they were instituted.

As the program grew, it became apparent that it needed an ambulance specially equipped for infants and children and dedicated to their needs. The appeal was taken to Maine Medical Center's Children's Miracle Network, and the public responded with the

## Healthy for Life nominated for Emmy

Nominations for the 19th annual New England chapter of the National Academy of Television Arts and Sciences Emmy awards were announced recently. These awards are given in recognition of excellence in television journalism. *Healthy for Life: Finding, Treating, and Beating Breast Cancer*, a collaborative effort between Maine Medical Center, WGME NewsChannel 13, and Shop 'N Save Supermarkets received a nomination in the Informational/Public Affairs Specials category.

*Healthy for Life* programming combines the power of commercial television with the expertise of Maine Medical Center's healthcare professionals in an effort to reach people throughout NewsChannel 13's viewing area.

*Finding, Treating, and Beating Breast Cancer* concluded a 60-part series about breast health and introduced viewers to the Buddy Check program. Viewers were encouraged to call a special 800 number to receive a packet of information, including reminder stickers for their calendars, cards demonstrating self-exam, and information about mammography and the importance of regular physician visits.

WGME NewsChannel 13 is the only Maine station nominated for a New England Emmy. The awards will be presented in Boston May 11.

### **AMBULANCE, FROM P.1** necessary funds.

"Our program started because of the needs of sick babies and children," says Dr. Bagwell, "and as it grew, the purchase of an ambulance designed for children became a dream, a dream that has now been realized. Tomorrow, or the next day, the transport teams will be called into action and we will be ready to respond."

MMC's Children's Miracle Network raises a quarter of a million dollars each year through year-round events and during the Children's Miracle Network Telethon broadcast on NewsChannel 13. This year's Telethon, hosted by Felicia Knight and Kim Block, airs June 1 and 2.

The ambulance was dedicated during an afternoon of ceremonies and an open house Thursday, April 25, at the Dana Center.

# NURSING BI-LINE

A publication of Nursing Services

## Nurse To Nurse

Once again we approach National Nurses' Week, that is, those few days each year when we celebrate our profession and ourselves as nurses. It is a time when I reflect on those who walked these halls before us and those yet to come, hoping that we are successfully sustaining our proud heritage and building a base of excellence for tomorrow's nurses. With the healthcare world experiencing phenomenal change, there are essential professional constants that guide practice: a caregiver must be values-based, scientifically sound, empathetic, a team player, and outcomes-oriented. Clarity about one's work and the services that define it is critical to achieving excellent care and role fulfillment.

I suggest that each of us take a few minutes to revisit our MMC Nursing Philosophy. In it, you will find that we adopted Virginia Henderson's definition of nursing which imparts expectations for our practice and assures

a common definition for MMC nurses. Her definition has withstood 40 plus years of intellectual analyses and practical testing!

Ms. Henderson was an exceptional leader who helped shape nursing for all times. She contributed to our art and our science through academic, clinical, and creative acts. Her practice spanned seven decades and provided a model for many. In recognition of her countless contributions to nursing and in appreciation for the special way she touched our lives and influenced our work it seems only fitting to honor her in this edition of *Nursing Bi-Line*. It is my hope that the values inherent in her writing and teaching strike a meaningful chord with each of you.

As we celebrate Ms. Henderson's life, we also celebrate you and your nursing practice. You, like Virginia Henderson, "do for others what they are unable to do for themselves". It is a critical service that requires special talents to do well. Thank you.

--Judith T. Stone, RN

Vice President for Nursing and Patient Services

## A Tribute to Virginia Henderson

Virginia Henderson was born in 1897 in Kansas City, Missouri, and, at the age of three, moved with her family to Virginia. In 1919, she entered the Army School of Nursing, a three-year diploma program in Washington, DC. During the program, Ms. Henderson traveled to many sites for clinical experiences, including the Boston Floating Hospital and the Henry Street Settlement in New York where Lillian Wald began modern public health nursing. These experiences were strong influences on Ms. Henderson's work throughout her professional life.

Upon graduation, Ms. Henderson accepted

Virginia Henderson visited MMC in 1989 for one of her famous "Conversations". She appears above with Judy Stone, RN, Vice President for Nursing and Patient Services. A/V Photo.

(per LG, 204 A/V Photo)

a position at Lynchburg Hospital as the first full-time teacher in a diploma program. She practiced public health nursing in New York City and obtained a baccalaureate degree from Teachers College at Columbia University and a masters degree in Education. She was a member of the faculty at Teachers College from 1932 to 1952 and was devoted to teaching the art and science of clinical nursing.

In 1953, Ms. Henderson went to Yale and shortly thereafter collaborated with Leo Simmons on a project related to the status of nursing research titled *Survey and Assessment of Nursing Research*; they reviewed the major works in nursing at that time.

Ms. Henderson went on to become the Director of the Nursing Studies Index Project. This project included the most extensive compilation of nursing literature to date and made it possible for nurses to review literature in a systematic and logical way. More than 5,000 pieces of nursing literature were analyzed and categorized to facilitate accessibility to the cumulative works of nurses throughout the country. Prior to the completion of this project, it was virtually impossible for nurse researchers and writers to thoroughly review the nursing literature.

While at Columbia, Ms. Henderson undertook one of her most famous contributions to nursing education, the nursing textbook known as Harmer and Henderson's *Principles and Practice of Nursing*. This textbook was used widely in schools of nursing in the United States and throughout the world; it has been translated into several languages.

During this time, she contemplated the purpose of nursing and articulated clearly what has become the most widely known and accepted definition of nursing. Our own MMC Nursing Philosophy incorporates this definition:

*Nursing is primarily helping people, sick or well, in the performance of those activities contributing to health or its recovery (or to a peaceful death) that they would perform unaided if they had the necessary strength, will, or knowledge. It is likewise the unique contribution of nursing to help*

*people to be independent of such assistance as soon as possible.* (Henderson and Nite, *Principles and Practice of Nursing*, 6th edition, 1978).

Henderson's definition for the first time identified functions unique to the nursing profession and offered a rationale for nursing activities, differentiating nursing from other disciplines on the basis of how knowledge is used (Janet Schwartz Fulton, RN, "Virginia Henderson: Theorist, prophet, poet", *Advanced Nursing Science*, 1987, 10(1), 1-9, Aspen Publishers). In 1961, the International Council of Nurses published Ms. Henderson's definition of nursing.

Ms. Henderson's work in nursing resonated throughout the world and she became an international leader in advancing the nursing profession. She was honored for her work through prestigious awards, honorary doctoral degrees from twelve universities in the US and Canada, and memberships in nursing organizations in Europe, Asia, and the Middle East. Her name is recognized internationally and leaders from many countries sought her consultation and perspective on a variety of issues in nursing and nursing education.

In addition, she was a member of the Royal College of Nursing in the United Kingdom, an honor accorded very few nurses outside of England. English nurses have considered her to be the modern Florence Nightingale. Ms. Henderson was an honorary member of nursing associations in Columbia, Canada, Ireland, Japan, Spain, Pakistan, and many other countries. In 1985, she was bestowed the first International Nursing Award, the Christiane Reimann Award (in Tel Aviv). She has received the highest and most distinctive honors from the American Nurses' Association, the American Association of Colleges of Nursing, and Sigma Theta Tau (International Honor Society of Nursing). Sigma Theta Tau's Nursing Library in Indianapolis was named for her extraordinary contributions to nursing research and scholarship.

In her later years and well into her nineties, Ms. Henderson continued to speak out for and about nursing at meetings throughout the

world. Her famous "Conversations with Virginia Henderson" were a blend of visions of the future of nursing and healthcare with historical perspectives; her wit and charm blended harmoniously with her wisdom.

—Compiled by Derreth Roberts, MS, RN, with information from Ann Sheridan, RN, Associate Professor of Nursing, UMass Amherst, and Kathleen Flynn, RN, formerly of the School of Nursing at Yale University and a personal friend of Virginia Henderson

Ms. Henderson, RN, died Tuesday, March 19, 1996, in a hospice in Branford, Connecticut, at the age of 98.

## Nursing scholarships available

The Nursing Services Scholarship and Loan Committee will soon consider grants for the 1996-97 school year.

Any MMC employee enrolled in or accepted into an accredited nursing program (MS, BS, AD, Diploma, LPN, CNA) is eligible to apply. The committee considers grants for both Spring and Fall semesters at the same time, so applicants should anticipate their needs for the full year.

Applications are available in the office of the Vice President for Nursing/Patient Services. The application deadline is July 3. For further information, contact committee chairperson Suneela Nayak, MSN, RN, Nursing Resources, x2397.

*Congratulations  
to Kelly Wood, RN,  
Assistant Head Nurse, R6, for her great  
finishing time in the Boston Marathon!*

## Presentations and Publications

• **Deborah Linscott, RN**, Perinatal Clinical Nurse Specialist, has been published in the March issue of *The Journal of Perinatal & Neonatal Nursing*. She authored a literature review on the topic of "Pregnancy and Immunosuppressive Drug Therapy".

• **Susan Goran, RN**, Nursing Resources, authored an article with Paul Cox, MD, Mirle Kellett, Jr., MD, Jeremy Morton, MD, and Sid Wolvek, MA, entitled "Plaque Abrasion and Intra-aortic Balloon Leak", which was published in the December 1995 issue of *Chest*.

## We celebrate and honor our nurses

### National Nurses' Week

May 6 -- 10

Watch for activities on  
each patient unit,  
along with an essay contest  
and poster display in  
second floor bypass corridor!

### *The First Annual Celebrate Nurses' Stories Contest*

## Let your voice be heard during Nurses' Week!

We invite you to submit an essay  
telling about one of the following:

- A "defining moment" in practice
  - A vision for future practice
  - A description of a change in practice that could provide a visible patient outcome

Submit your typed or  
neatly written essay  
of no more than 500 words to  
the Office of the Vice President for  
Nursing and Patient Services  
by 1200 hours Monday, May 6.

First Prize: \$300

Two Honorary Mention Awards:  
\$50 each

## Research Connection: Operating Room Grant Proposal Selected for Funding

A grant proposal for *Prediction and Prevention of Pressure Ulcers in Surgical Patients* has been selected for approximately \$19,500 in funding by the Association of Operating Room Nurses. The purpose of the study is to test the effectiveness of a special mattress overlay and heel and elbow protectors in reducing the incidence of pressure ulcers in patients who have been to the operating room. In addition, we will learn more about predisposing characteristics of patients who are at risk for skin breakdown. The research team includes Alyce Schultz, Nurse Researcher; Maureen Bien, RN, Head Nurse, OR; Karen Tolan, RN, and Priscilla Bragdon, RN, Assistant Head Nurses, OR; Marti Riehle, RN, Clinical Director, Perioperative Services; and Lois Bazinet, RN, Staff Development.

Annotated bibliographies from two studies reviewed in preparation for this proposal are included below. They were written by Karen Tolan, RN. A complete integrated review of the research literature used in this grant application will be presented by Karen at the 8th annual conference "Toward Research-Based Clinical Practice" to be held in Nashua, NH, on May 10th.

1) Hoshowsky, V. M. & Schramm, C. A. (1994). "Intraoperative pressure sore prevention: An analysis of bedding materials". *Research in Nursing & Health*, 17, 333-339. The purpose of this study was to examine the effects of two OR table mattresses and one mattress overlay on intraoperative pressure sore formation and to identify factors predictive of pressure sore development during this period. A convenience, or non-randomized, sample of 505 patients was selected. Inclusion criteria were age over 21 years, placement in supine or prone position, and possession of symmetrical lower limbs. Standard vinyl-covered two-inch thick foam OR table mattresses, nylon fabric-covered two-inch thick foam and gel OR table mattresses, and viscoelastic drypolymer mattress overlays were

compared. Factors predictive of pressure sore formation included time on the OR table longer than 2.5 hours, presence of vascular disease, age over 40 years, and a preoperative Hemphill rating of 4 or more. Findings indicated that the foam and gel mattress was effective for preventing skin changes, while the viscoelastic overlay was effective for preventing both skin changes and pressure sore formation. Subjects were only followed, however, in the immediate postoperative period.

2) Scott, A. M., Mayhew, P. A., & Harris, E. A. (1992). "Pressure ulcer development in the operating room". *AORN Journal*, 56(2), 242-250. Based on a review of the literature, the authors use a case study to describe the appearance and development of pressure sores that occur during the intraoperative period. These sores may not appear until hours or days after the surgery. The pressure sore first appears as a reddened area resembling a burn within two to 48 hours postoperatively. The area rapidly progresses to an ecchymotic area that resembles a bruise or a dark discoloration in people with dark skin. In the next stage, the skin may form blisters or begin to peel, exposing the partial-thickness skin layers. Two to six days after the initial insult, necrosis is noted.

If you would like more information, please call Karen Tolan, x4600, or Alyce Schultz, x6011.

--Alyce Schultz, RN, PhD, Nurse Researcher,  
and Karen Tolan, RN, Assistant Head Nurse, OR
